## **SEA TECHNOLOGY INDEX**

Volume 20, 1979
This is a three-part, instant-reference index of technical material

This is a three-part, instant-reference index of technical material and news appearing in Sea Technology magazine, Volume 20, 1979. Part One, Monthly Contents; Part Two, Authors; Part Three, Subject Index. Numbers following title, author or subject are month and page number.

## PART ONE MONTHLY CONTENTS

January 1979
Is Whipcracking In Order? Editorial7

"keyed" Quick-Connects eliminate accidental intermixing of liquids or gases from different lines in multi-fluid systems.

They're available with eight separate keys, each featuring a positive mechanical lockout system which prevents coupling of unmatched stems and bodies. They're also numbered and color coded for convenience in making connections. And they will not interchange with any other type of quick-connect.

Automatic shut-off minimizes pressure loss or fluid spillage during uncoupling. An attempt to couple unlike "keys" will not open the shut-off valves and allow accidential flow.

SWAGELOK "keyed" Quick-Connects are available from local distributors in brass and 316 stainless steel, with SWAGELOK or NPT end connections in 1/8", 1/4", 3/8" and 1/2" sizes.
